Product Catalogue 2020

Heritage Products

Tree Trunks Pty Ltd trading as Heritage Products

07 3276 2222 info@heritageproducts.com.au heritageproducts.com.au

Welcome.

We are proud to present our
2020 Product Catalogue.

Heritage Products

Our complete product range is available throughout Australia, distributed by a comprehensive wholesale network.

All pine products are manufactured from Chain of Custody (CoC) Certified Clear Australian plantation Araucaria.

External pine products are treated with environmentally responsible LOSP using the most up-to-date technology available.

Weathertex products carry the manufacturer's warranty.

No structural rating is implied or warranted with our decorative elements.

Your selection of our products can be themed together to give you your own individual, elegant heritage home.

Special designs or reproductions can be manufactured to your specifications. Price on Application.

The measurements of all turned products are traditionally taken from the section size from which they are turned.

HERITAGE PRODUCTS

SOLID TIMBER WINDOWS and DOORS

Heritage Products

Timber doors and windows to match every design brief.

What is Envirowood?

Envirowood is a range of doors and windows made from Australian plantation araucaria timber - Australia's most traditional joinery and building specie.

This premium timber has a higher density and hardness rating than most imported species used for joinery manufacture and has a straight, even grain providing an excellent finish whether painted, stained or clear finished.

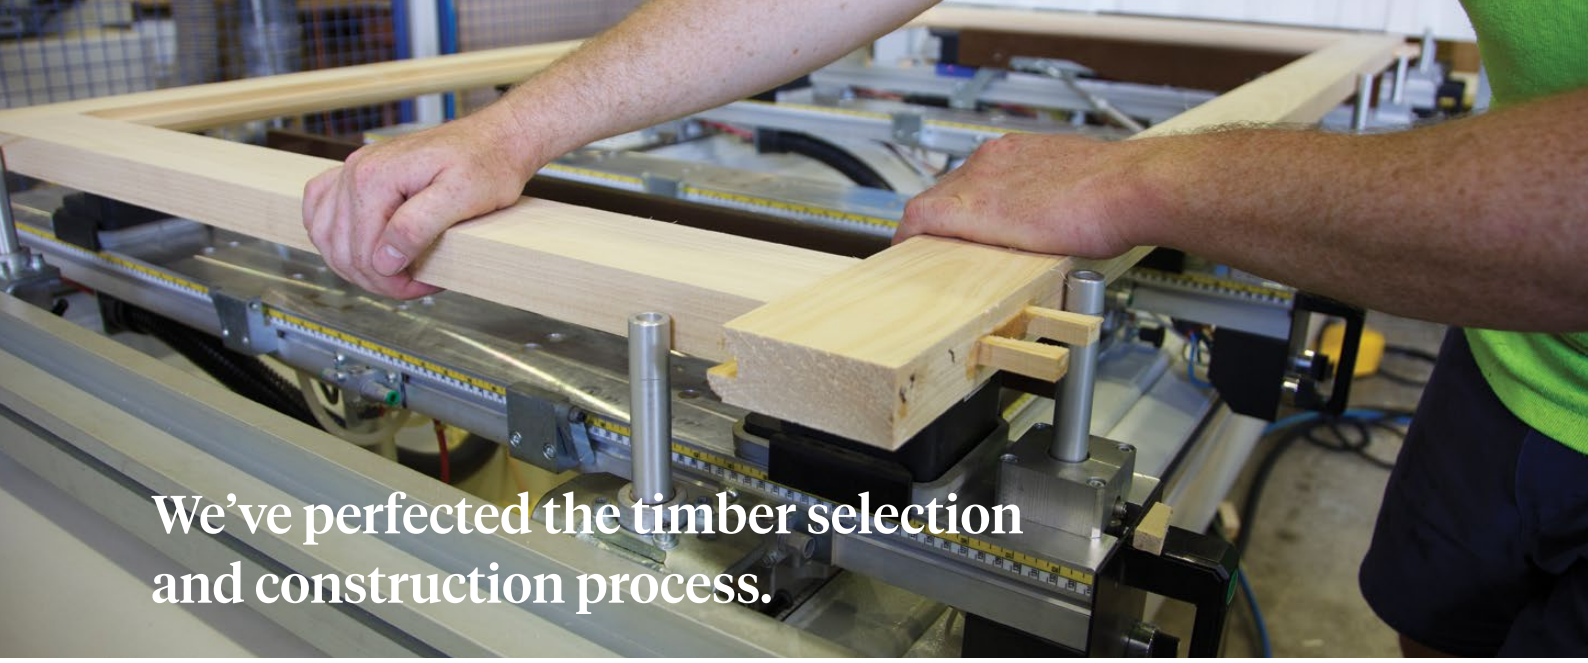
What is New Guinea Rosewood?

New Guinea Rosewood is a richly coloured hardwood which has made it highly prized for furniture and Joinery. Sands to a very fine finish and produces a high polish with a golden lustre.

Rosewood is also termite resistant and is well sought after by master craftsmen.

Quoting made Easy

Simply send your architectural plans to **info@heritageproducts.com.au** and we will have an estimate back to you within 2-3 days.



We've perfected the timber selection and construction process.

Envirowood delivers.

Durability.
Gain assurance from our industry leading 25-year guarantee against fungal decay and termites and 6 years against faulty workmanship.

Strength.
Envirowood is constructed using traditional wedged mortise and tenon construction used by traditional craftsman for centuries. Quite simply, Envirowood is built to last a lifetime.

Stability.
Araucaria is proven as one of the best softwoods in the World, a key reason for this being the superior stability of the timber.

Hardness.
Araucaria is not a pine and belongs to the genus araucariaceae. Compared to most imported species used for joinery manufacture, including Western Red Cedar and Surian cedars, araucaria has a higher density and hardness rating.

Finish.
Araucaria with it's straight, even grain provides a far superior stain or paint finish, with no furriness and minimal colour variation.

Energy Efficiency.
Envirowood Timber Joinery comes standard with Low E Glass and is over 25% more energy efficient than aluminium offering extreme comfort in all climates. All glazing is in accordance with the Australian Glazing Standard AS1288.

Environmental Excellence.

Envirowood is made from Australian plantation timber and carries full Chain of Custody (CoC) Certification under Responsible Wood Certification Scheme.

Responsible Wood* are committed to protecting and promoting Australia's unique environments with standards that ensure a forest industry that is environmentally, socially, culturally and commercially sustainable.

Technical Information

Product:	Envirowood
Species:	Plantation Araucaria Cunninghamii
Durability:	Externally durable H3 light organic solvent preservative (LOSP)
Grain:	Straight
Texture:	Very Fine
Density:	560KG/M3
Guarantee:	Fungal attack or rot 25 years Manufacture or materials 6 years

Breezway Louvre Galleries available in a variety of colours and blade options.

Sourced from 100% sustainable, environmentally managed plantation forests.

Guaranteed to last.

With our own sawmills and manufacturing plants Heritage Products have been perfecting the selection and construction methods of Envirowood for over 100 years.

Many of Brisbane's century old doors and windows came from our factory and their proven performance is testament to the strength, durability and stability Envirowood delivers resisting our harsh Australian weather conditions.

The Envirowood 25 year product guarantee is unmatched and complemented by:

Conformance.

Envirowood is 3rd party audited and tested in a NATA approved testing facility to ensure conformance to AS2047 requirements - passing strict water and wind load standards.

Certification.

For your safety and comfort all Envirowood joinery is certified to the Australian Glazing Standard AS1288.

Plus Envirowood carries full Australian Forestry Standard Chain of Custody Certification.

Confidence.

The Araucaria harvested and processed into Envirowood by Heritage Products at Yarraman Pine Pty Ltd in Queensland is grown in plantations that are third party certified for sustainable forest management. Finlayson's also has Araucaria Chain of Custody Certification to the Australian Standard.

Did you know?

Did you know?

Araucaria has been used in construction since the first settlement and is the only successful Australian native timber to be grown in large scale commercial plantations.

Did you know?

Heritage Product's deliver Australia wide.

Did you know?

Envirowood provides 6 star comfort, beauty...and energy efficiency.

Did you know?

Heritage Product's are the market leaders in replacing imported rainforest timbers which are still commonly used for much joinery manufacture in Australia with traditional Australian plantation timbers.

Did you know?

Your piece of mind is assured with Heritage Product's joinery as we are accredited members of the Australian Window Association.

Did you know?

Prior to manufacture customers receive a full set of shop drawings to ensure there are no surprises when joinery arrives on site.

Big enough to deliver, small enough to care.

Product Guarantee

Heritage Product's offer an industry leading Product Guarantee for Envirowood Joinery.

- 6 years against defects arising from faulty workmanship or materials.
- 10 year structural guarantee against fungal decay (rot), termite attack and insect borers - product replacement and labour costs.
- 25 year structural guarantee against fungal decay (rot), termite attack and insect borers - product replacement.

Conditions, Exclusions and Limitations of Guarantee

- Envirowood Joinery Installation and Maintenance Instructions must be followed. (Please see pages 32 and 33)
- Envirowood must be used in a manner consistent with the Building Codes of Australia.
- Envirowood must have a paint or stain system maintained for the life of the product. All faces and all edges must be maintained to ensure optimum serviceability, appearance and dimensional stability.
- Where Envirowood products are cut, notched, drilled or rebated on site, the exposed area must be resealed with a suitable resealing product such as Tanalised Enseal Clear or Tanalised Ecoseal to ensure that an integral treatment envelope is maintained.
- The Light Organic Solvent Preservative (LOSP) used in Envirowood is manufactured by Arch Wood Protection to protect from fungal decay, termite attack and insect borers. The guarantee applies for any correctly treated, installed and maintained Envirowood products which become structurally unserviceable due to the action of termites or decay.
- Guarantee does not cover deterioration or damage to Envirowood due to any other cause apart from fungal decay, termites or insect borers. Other issues not covered by guarantee may include weathering, corrosion, bleaching, mould and surface stains, checking, mechanical wear and tear, physical breakage etc.
- Guarantee is not in effect outside of Australia.
- Proof of purchase is required.

Finishing right -

Installation, care and maintenance instructions.

To get the very best performance from Envirowood and ensure your guarantee is valid, procedures for storage, handling and installation must be followed.

Many of the procedures relate to controlling the interaction of wood with water. Changing wood moisture content can lead to changes in shape and increased risk of fungal attack.

- All joinery must be sealed with an oil based primer or equivalent approved sealant within 48 hours of delivery but preferably as soon as it reaches site. For a nominal cost Envirowood can be supplied factory pre-primed. This provides temporary protection from weather and contamination during transport, site storage and construction. The priming of the putty is the purchasers responsibility and must be done as soon as a putty “skin” appears.
- The top, underside and edges of joinery should be sealed with 2 coats as this is where the end grain is located which gains/loses the most amount of moisture.
- Store joinery away from direct sunlight and out of the weather at all times. High humidity, pooled water and unusually hot locations should be avoided. Wetting or drying can cause distortion of joinery.
- All joinery should be stored flat on a minimum of 3 gluts and away from moisture.
- Joinery should be fitted to the relevant Australian Standards.
- It is the responsibility of the installer to ensure jambs are plumb and sill and heads are level to ensure square and free of twists or sag so joinery operates correctly.
- Protect the joinery if brickwork or rendering is being built around the frames.
- All external doors require three 100mm hinges per leaf.
- Double hung windows which have been factory hung, may need minor adjustment after the initial settling in period. This is the responsibility of the purchaser however can be carried out by Heritage Product’s for a nominal charge.

- Un-primed Joinery is supplied factory sanded with the final sanding and arising the responsibility of the purchaser/painter.
- When hanging joinery please allow sufficient clearance for 3-4 coats of paint to eliminate any binding.
- Joinery should be painted on a regular basis - some areas of your house may require more frequent painting and maintenance than others.
- Regular maintenance is required for all hardware, even stainless steel as they are moving parts. In most environments maintenance is recommended every 6 months and every 3 months in marine or industrial environments.
- The use of paint coatings in dark tones is not recommended for high sunlit areas and will void guarantee, as unreflected heat may cause distortion due to uneven drying.
- Installation where large differences in temperature can exist on each side of joinery items should be avoided. For example, an external west facing wall with air conditioning inside.
- All external doors require overhead protection this varies depending on design and should be discussed with your Building Design Engineer.

Please remember timber is a natural product and changes in climatic conditions will cause slight movements in joinery components. This is not considered a defect.

Araucaria

About the Timber.

Araucaria has a uniform colour, a fine even grain and texture with a high strength to weight performance that makes it ideal for many building and decorative applications.

Species

Araucaria is part of the Araucariaceae genus, which makes it a close relative of the well known Bunya pine, the Agathis (Kauri) species and Australia's "dinosaur tree", the Wollemi pine.

Benefits

- Araucaria is up to 30% denser than imported radiata pine.
- Araucaria has very long, fine and straight fibres ensuring an excellent flat grain for painting and extremely high strength to weight ratio
- Araucaria has no excess resin ensuring no nasty surprises and costly repaints through your finished paint system as can happen with radiata pine
- Araucaria is an Australian Forestry Standard (AFS) Certified Australian Plantation Timber.
- Our Araucaria mills are Responsible Wood certified guaranteeing our products are from sustainably managed forests.
- Due to the age of the trees and the stable Queensland climate where grown, Araucaria is free of raised grain, is more stable and has a superior finish when painted
