

Recommended Practice / February 2004

Issued by: Timber Queensland Limited

Introduction

This data sheet contains TRADAC's recommendations for attached and detached timber pergolas and carports with relatively flat skillion roofs and lightweight roofing (max 10 kg/m²). It covers the most common timber species, sizes and fixing methods. Where appropriate, separate tables are provided for low wind speed areas (N1, N2, N3 and C1) and higher wind speed area (N4 and C2). Wind classification C3 is beyond the scope of this data sheet. For alternative stress grades, fixing methods, larger spans, pitched roofs, wind classification C3 etc., refer AS 1684 – Residential timber-framed construction.

Note: The sizes and fixings assume pergolas are either roofed (lightweight roofing 10 kg/m²), or could have a roof installed at some future stage.

Timber selection

Pergola and carport framing exposed to the weather, including posts fixed above ground, shall be either preservative treated pine, durability class 1 or 2 hardwood, or cypress.

Posts embedded in the ground shall be durability class 1 hardwood, preservative treated pine or cypress (sapwood free).

Hardwood posts and framing containing sapwood shall be preservative treated.

Preservative treatment for posts in the ground shall be H5. Exposed framing and posts above ground shall be treated to H3.

Note: Lower durability timbers (e.g. Oregon, Tasmanian Oak, Victorian Ash) are not recommended for pergolas unless fully protected by a roof.

Member sizes

Tables 1, 2, 5 and 10 list the recommended sizes and spans for the most commonly available timber species. For alternative species and larger spans refer AS 1684.

Note: When appropriate separate tables are provided for different wind classifications. Tables with a suffix L are for low wind speed areas (N1, N2, N3 and C1). Tables with a suffix H are for higher wind speed areas (N4 and C2).

Fixings

Fixings (stirrups, brackets, bolts, nails etc) shall be either hot dipped galvanised or stainless steel.

Tables 3, 4, 7, 8, 9, 10, 11 and 12 contain recommended fixings between the various members. For alternative fixing methods refer AS 1684.

Note: When appropriate separate tables are provided for different wind classifications. Tables with a suffix L are for low wind speed areas (N1, N2, N3 and C1). Tables with a suffix H are for higher wind speed areas (N4 and C2).

(a) Typical attached pergola

(b) Typical freestanding carport

Figure 1 - Terminology

Figure 2 - Roof area supported by posts

Timber posts

Table 1 lists the sizes for timber posts.

Table 1 Timber posts - supporting pergola or carport roof (max. 10 kg/m²)

	Roof Area Supported (m ²)	5	10	20
	Member Size(mm)	Maximum Post Height (mm)		
Unseasoned Cypress F5	75 x 75	3400	2400	N/S
	100 x 100	4800	4200	3000
Seasoned Treated Pine F7	70 x 70	3500	2500	N/S
	90 x 90	4800	4100	2900
Unseasoned Hardwood F14	75 x 75	4800	3400	2400
	100 x 100	4800	4800	4200
Treated Pine Rounds F8	100 dia	4800	3400	N/S
	125 dia	4800	4800	3600
	150 dia	4800	4800	4800

Attaching posts to timber decks

Posts supporting roofs or pergolas over timber decks shall occur directly over deck supports. Posts supporting decks and roofs may be continuous from ground to roof beams with deck bearers fixed to sides of posts (refer Technical Data Sheet 4). Alternatively, posts supporting roofs shall be fixed to bearers with the required fixing type listed in Tables 3 and 4.

Installing posts in ground

Sawn timber posts should preferably be fixed to hot dipped galvanised steel stirrups set in concrete. A minimum clearance of 75 mm shall be provided between the top of the concrete footing or paving and the bottom of the post as a termite inspection zone.

Posts embedded in the ground shall be provided with stainless steel mesh socks (TermiMesh) or alternatively the surrounding ground shall be chemically treated.

Holes for embedded posts shall be filled with 100 mm depth of coarse gravel (to allow water to drain) before backfilling with concrete or rammed earth. Top of backfill shall be sloped away from posts to shed water.

(a) Fixed to stirrup (b) Embedded in ground

Figure 3 - Installing posts

Pergola or carport beams

Tables 2L and 2H list the sizes and spans for pergola or carport beams in low wind speed and higher wind speed areas.

Table 2L Pergola or carport beams - (wind classifications N1, N2, N3 and C1)

	Member Size	Roof Load Width							
		1500	3000	4500	6000	1500	3000	4500	6000
		Maximum Beam Span (mm)							
Single Span				Continuous Span					
Unseasoned Cypress F5	100 x 50	N/S	N/S	N/S	N/S	1800	N/S	N/S	N/S
	100 x 75	1700	N/S	N/S	N/S	2300	1600	N/S	N/S
	125 x 50	1800	N/S	N/S	N/S	2500	1600	N/S	N/S

	200 x 50	4400	3400	2800	2400	5100	3500	2900	2600
	200 x 75	4700	4200	3300	2900	5800	4300	3400	3000
	250 x 50	5100	4400	3500	3000	6300	4500	3600	3100
	250 x 75	5400	4900	4400	3700	6700	5400	4400	3800

Note: Maximum overhang shall be 25% of the actual backspan.

Figure 4 - Roof load width

Fixing beams to posts

Beams shall be fixed to posts as listed in Tables 3 & 4. Where beams are housed into posts, a minimum of 35 mm of post shall remain.

Alternatively, beams can be fixed to posts with proprietary galvanised steel brackets in accordance with manufacturer's recommendations.

Multiple beams

Where covered by a roof, double beams may be either spaced apart (with a solid timber separating block at mid-span) or nail laminated together to form a single beam.

Fully exposed double beams in unroofed pergolas shall be spaced.

Figure 5 - Multiple beams

Table 3 Fixing types - posts to bearers or beams

	Fixing Type	Description
	P1	1/M10 bolt
	P2	1/M12 bolt
	P3	2/M10 bolts
	P4	2/M12 bolts
	P5	2/M10 bolts
	P6	2/M12 bolts
	P7	2/M16 bolts

Table 4L Fixing requirements - Posts to bearers or beams (Wind classifications N1, N2, N3 and C1)

	Roof Area Supported (m ²)			
	5	10	15	20
	Fixing types permitted			
Unseasoned Cypress F5 (J3)	P4 P5	P5	P6	P7
Seasoned Treated Pine F7 (JD4)	P3 P5	P5	P6	P6
Unseasoned Hardwood F14 (J2)	P1 P5	P5	P6	P7

Note: For roof area supported refer Figure 2.

Table 4H Fixing requirements - Posts to bearers or beams (Wind classifications N4 and C2)

	Roof Area Supported (m ²)			
	5	10	15	20
	Fixing types permitted			
Unseasoned Cypress F5 (J3)	P5	P6	P7	P7
Seasoned Treated Pine F7 (JD4)	P5	P6	P7	P7
Unseasoned Hardwood F14 (J2)	P4 P5	P6	P7	P7

Note: For roof area supported refer Figure 2.

Pergola or carport rafters

Tables 5L and 5H list the sizes and spans for pergola or carport rafters in low wind speed and higher wind speed areas.

Table 5L Pergola or carport rafters - (Wind classification N1,N2,N3 and C1)

	Member Size	Rafter Spacing				
		600	900	600	900	
		Maximum Rafter Span (mm)				
		Single Span		Continuous Span		
Unseasoned Cypress F5	100 x 38	2000	1800	2400	2200	
	100 x 50	2300	2100	3000	2500	
	125 x 38	3000	2800	3600	2800	
	125 x 50	3400	3100	4200	3300	
	150 x 38	3800	3400	4400	3500	
	150 x 50	4000	3700	5100	4000	
	175 x 38	4300	4000	5200	4100	
	175 x 50	4600	4200	6000	4800	
	200 x 38	4900	4500	6000	4800	
	200 x 50	5100	4800	6900	5500	
Seasoned Treated Pine F7	90 x 35	1900	1800	2400	2200	
	90 x 45	2200	2000	2700	2500	
	120 x 35	3200	3000	3800	3000	
	120 x 45	3800	3400	4300	3400	
	140 x 35	4300	3500	4500	3500	
	140 x 45	4800	4000	5100	4000	
	190 x 35	5900	4900	6100	4900	
	190 x 45	6200	5600	7000	5600	
	240 x 35	7200	6200	7200	6200	
	240 x 45	7200	7100	7200	7100	
Unseasoned Hardwood F14	100 x 38	2700	2500	3500	3200	
	100 x 50	3200	3000	4300	3900	
	125 x 38	3700	3400	5100	4700	
	125 x 50	3900	3700	5400	5000	
	150 x 38	4400	4100	6000	5500	
	150 x 50	4600	4300	6300	5900	
	175 x 38	5000	4700	6800	6300	
	175 x 50	5200	4900	7100	6700	
	200 x 38	5600	5200	7200	7100	
	200 x 50	5800	5500	7200	7200	
	250 x 38	6700	6300	7200	7200	
		250 x 50	7000	6600	7200	7200

Notes: For unnotched rafters, maximum overhang shall be 25% of the actual backspan.
For notched rafters, overhang limits shall be in accordance with AS 1684.

Table 5H Pergola or carport rafters - (Wind classification N4 and C2)

	Member Size	Rafter Spacing				
		600	900	600	900	
		Maximum Rafter Span (mm)

	125 x 50	3900	3700	5400	4400	
	150 x 38	4400	4100	5800	4600	
	150 x 50	4600	4300	6300	5300	
	175 x 38	5000	4700	6800	5500	
	175 x 50	5200	4900	7100	6300	
	200 x 38	5600	5200	7200	6300	
	200 x 50	5800	5500	7200	7200	
	250 x 38	6700	6300	7200	7200	
		250 x 50	7000	6600	7200	7200

Notes: For unnotched rafters, maximum overhang shall be 25% of the actual backspan.
For notched rafters, overhang limits shall be in accordance with AS 1684.

Attaching pergola or carport to house

Provided the wall frame of the house is checked to ensure it can carry the additional load, pergolas and carports can be attached to the wall (refer method W1).

Provided the wall frame is adequate, and the house roof frame and tie-down fixings are checked and increased where necessary to ensure it can carry the additional load, and withstand the additional uplift (refer Table 6), pergolas and carports can be attached to fascias/eaves.

Pergolas and carports may be attached to the fascias/eaves by methods F1, F2 and F3 as allowed in Table 7L and 7H.-

- The maximum overhang of house rafters or trusses shall not exceed 750 mm from outside of top plate to end of rafter/truss.
- For sheet roofed houses with 900 mm rafter spacing in wind classification N4 or C2, the minimum size of F5 or MGP 10 rafters (or top chords) shall be 90 x 45 mm. In all other cases, the minimum size of house rafters (or top chords) shall be 90 x 35 mm.
- Timber fascias shall be minimum 190 x 25 mm.
- Metal fascias shall be stiffened with 150 x 50 mm nogging and 100 x 38 mm ledger as shown on detail.
- Pergola or carport rafters may be notched up to 1/3 their depth.
- Maximum pergola or carport rafter spacing shall be 900 mm.
- Maximum mass of roof sheeting shall be 10 kg/m²

Note: Pergolas and carports exceeding these conditions shall be attached to the wall framing in accordance with method W1.

Table 6 Additional uplift force from carport/pergola

Wind Classification	Additional uplift (kN) for carport or pergola rafter spans				
	1800	2400	3000	3600	4200
N1 & 2 (W28/33N)	0.9	1.2	1.4	1.7	2.0
N3 (W41N) C1 (W41C)	1.4	1.9	2.3	2.8	3.3
N4 (W50N) C2 (W50C)	2.1	2.3	3.5	4.2	4.9

Figure 6 - Metal Fascias

Ensure properly sealed / primed before fixing in place.

Figure 7 - Maximum notching

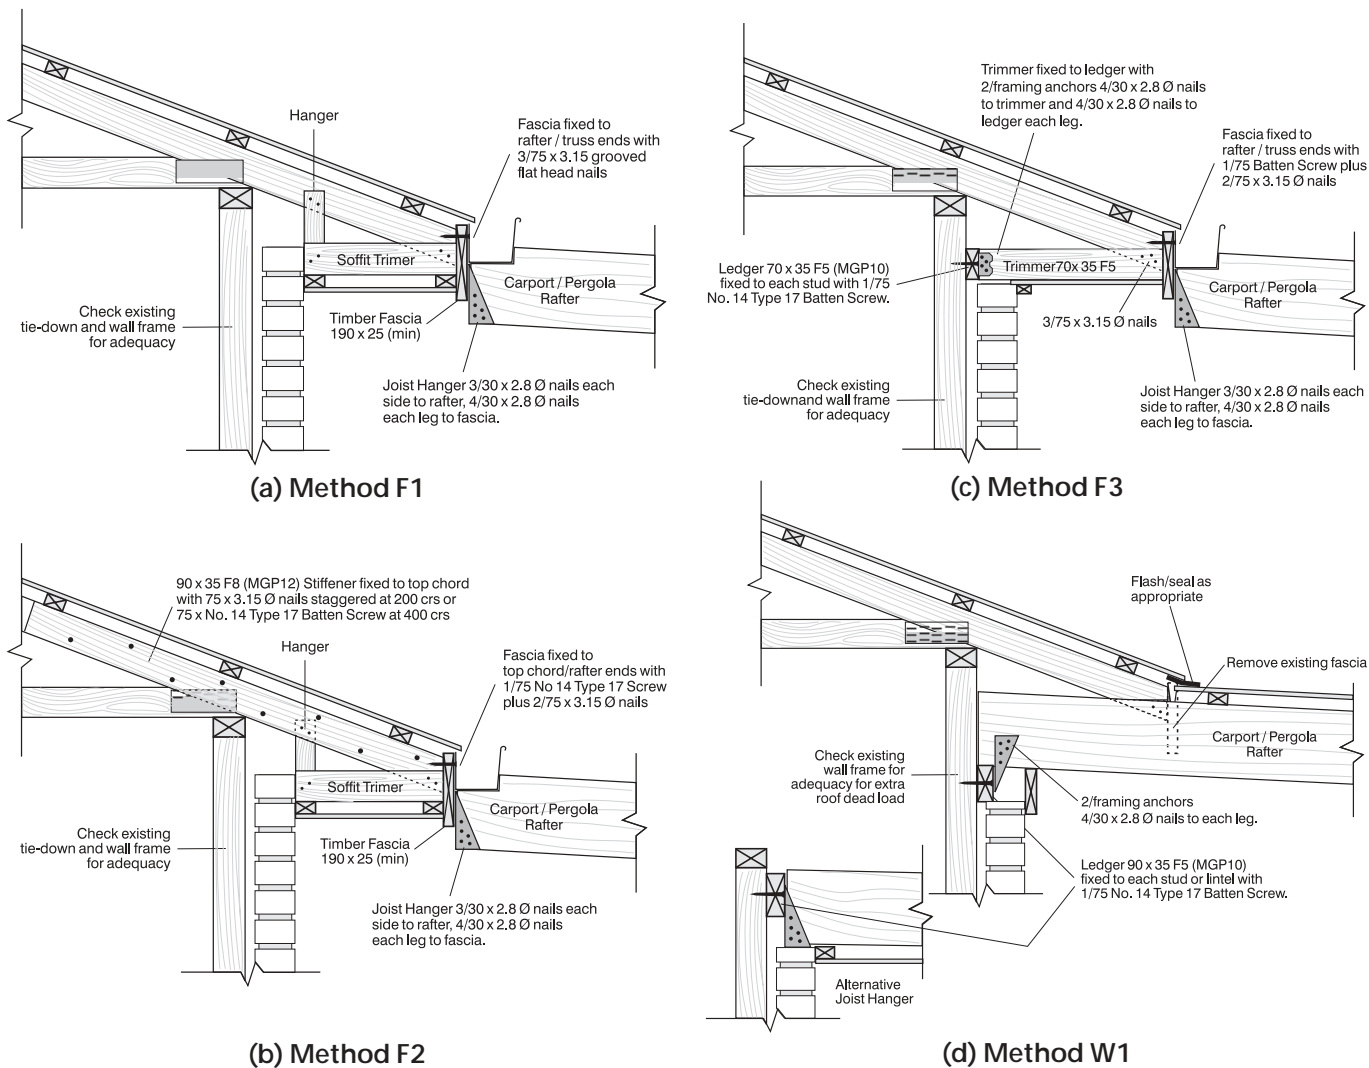

Figure 8 - Methods for attaching pergola and carport to house

Table 7L Attaching pergola or carport to house (Wind classifications N1, N2, N3 and C1)

House Roof		Acceptable method of attachment				
Roof Type (rafter spacing)	Rafter/Truss Stress Grade	Pergola/carport rafter span (mm)				
		2400	3000	3600	4200	
Tile (600 mm)	F5 (MGP 10)	F2	F2	F2		
		F3	F3	F3	F3	
		W1	W1	W1	W1	
	F8 (MGP 12) or better	F1				
		F2	F2	F2	F2	
		F3	F3	F3	F3	F3
Sheet (900 mm)	F5 (MGP 10)	W1	W1	W1	W1	
		F2

	F8 (MGP 12) or better	F2				
		F3	F3	F3	F3	F3
		W1	W1	W1	W1	

Note: Method F1 may also be used (in wind classifications N1 and N2 only) for F5 (MGP10) pergola or carport rafters up to 2700 mm span, and for F8 (MGP12) or better pergola or carport rafters up to 4200 mm span.

Table 7H Attaching pergola or carport to house (Wind classifications N4 and C2)

House Roof		Acceptable method of attachment	
Roof Type (rafter spacing)	Rafter/Truss Stress Grade	Pergola/carport rafter span (mm)	
		Up to 2700	Exceeding 2700
Tile (600 mm)	F5 (MGP 10)	F3	
		W1	W1
	F8 (MGP 12) or better	F3	
Sheet (900 mm)	F5 (MGP 10)	W1	W1
		F3	
	F8 (MGP 12) or better	F3	
		W1	W1

Fixing rafters to beams or ledgers

Pergola and carport rafters shall be fixed to beams with the fixing type listed in Tables 8 and 9.

Table 8 Fixing types - rafters to pergola or carport beams

Fixing Type	Description	
Framing anchors as per table, 4/2.8 dia nails in each leg 	R1	1/galvanised framing anchor
	R2	2/galvanised framing anchors
30x0.8 mm strap with 3/2.8 mm Ø nails each end as per table 	R3	1/30 x 0.8 mm galvanised iron strap
	R4	2/30 x 0.8 mm galvanised iron strap
75x50x5 mm MS angle with 1/M10 bolt or 40 mm No14 Type17 screws to rafter as per table Rafter thickness 35 mm (min.) 	R5	Fixings to each leg 1/No.14 Type 17 screw
	R6	2/No.14 Type 17 screw
	R7	1/M10 bolt
	R8	1/M10 bolt
	R9	1/M12 bolt

Table 9L Fixing requirements - Rafters to pergola or carport beams (Wind classifications N1, N2, N3 and C1)

	Roof Area Supported (m ²)		
	2	4	6
	Fixing types permitted		
Unseasoned Cypress F5 (J3)	R1 R3 R5 R8	R4 R6 R8	R8
Seasoned Treated Pine F7 (JD4)	R1 R3 R5 R8	R4 R6 R8	R9

Unseasoned Hardwood F14 (J2)	R2 R3 R5 R8	R4 R6 R8	R8

Roof battens

Tables 10L and 10H list the sizes and spans for roof battens in low wind speed and higher wind speed areas.

Table 10L Roof battens - supporting lightweight roof (max. 10 kg/m²) (Wind classifications N1, N2, N3 and C1)

	Batten Spacing	300	600	900	1200
	Member Size (d x b)	Maximum Batten Span (mm) (rafter spacing)			
Unseasoned Cypress F5	38 x 75	900	700	550	550
	50 x 75	900	900	900	900
	75 x 38	900	900	900	900
	75 x 50	900	900	900	900
Seasoned Treated Pine F7	35 x 70	900	850	650	650
	45 x 70	900	900	900	900
	70 x 35	900	900	900	900
	70 x 45	900	900	900	900
Unseasoned Hardwood F14	25 x 50	900	N/S	N/S	N/S
	38 x 50	900	900	900	900
	38 x 75	900	900	900	900
	50 x 75	900	900	900	900

Note: Maximum overhang shall be 25% of the actual backspan.

Table 10H Roof battens - supporting lightweight roof (max. 10 kg/m²) (Wind classifications N4 and C2)

	Batten Spacing	300	600	900	1200
	Member Size (d x b)	Maximum Batten Span (mm) (rafter spacing)

	50 x 75	900	900	900	900
	75 x 38	900	900	900	900
	75 x 50	900	900	900	900
Seasoned Treated Pine F7	35 x 70	900	850	650	650
	45 x 70	900	900	900	900
	70 x 35	900	900	900	900
	70 x 45	900	900	900	900
Unseasoned Hardwood F14	25 x 50	900	N/S	N/S	N/S
	38 x 50	900	900	900	900
	38 x 75	900	900	900	900
	50 x 75	900	900	900	900

Note: Maximum overhang shall be 25% of the actual backspan.

Fixing battens to rafters

Pergola and carport roof battens shall be fixed to rafters with nails, screws or framing anchors as listed in Tables 11 and 12.

Table 11 Fixing types - roof battens to rafters

	Fixing Type	Description
 <p>25x50 mm batten</p> <p>Nails as per table</p>	B1	1/65 x 3.05 mm dia. nail (deformed shank)
 <p>38x75 or 38x50mm batten</p> <p>Nails or screws as per table</p> <p>Two nails or screws shall be used only with 75mm wide batten</p>	B2	1/75 x 3.05 mm dia. nail (deformed shank)
	B3	2/75 mm long nails (deformed shank)
	B4	1/75 mm long No.14 Type 17 screws
 <p>Framing anchors 4/2.8 mm dia. nails to each leg</p>	B5	2/75 mm long No.14 Type 17 screws
	B6	1 framing anchor
	B7	2 framing anchors (each side of batten)

	B4	B4	B4	B4	B5
	B6	B6	B6	B6	B7

Figure 9 Bracing

Bracing

Carports and pergolas will require bracing to prevent lateral movement.

For pergolas attached to the house, bracing shall be either:-

- (a) Double diagonal 100 x 50 mm hardwood or 90 x 45 treated pine braces fixed to the underside of rafters with each brace fixed to each rafter with 75 mm No. 14 Type 17 batten screws or two 75 x 3.15 mm galvanised nails, or
- (b) Double diagonal 100 x 50 mm hardwood or 90 x 45 mm treated pine braces fixed between a pair of posts parallel to the wall, with braces bolted together at the crossing and to the posts at each end with 12 mm dia. hot dipped galvanised bolts, or
- (c) A pair of opposing knee braces to a pair of posts parallel to the walls. Knee braces shall be 100 x 50 mm hardwood or 90 x 45 mm treated pine, fixed at approximately 45° and bolted to beams and posts with two 12 mm dia. hot dipped galvanised bolts.

Freestanding pergolas and carports require double diagonal bracing between posts in both directions (i.e. at right angles) as described in (b) above.

Roofing

Roof sheeting, gutters, downpipes, drainage etc shall be installed in accordance with manufacturers recommendations and Local Authority requirements.

Finishing

All pergolas and carports shall have an applied finish as protection against the weathering effects of sun and rain and improve durability.

Note: Unprotected timber exposed to the weather will fade to a silver-grey colour and could distort, split or develop surface checking.

One coat of a water repellent preservative or an oil based primer shall be applied to concealed joints, laps etc prior to fixing. Additional coats of the selected finish shall be applied (to manufacturer's instructions) to all surfaces after construction. The following finish types are available:

Clear Finishes and Water Repellent Preservatives (WRP)

These are generally water repellent materials (waxes, resins, etc) in a light organic solvent base. They often also contain chemicals which inhibit decay. Water repellent preservatives provide good protection against moisture and are recommended as a priming coat for other coatings. The compatibility of WRP with other coatings should however be checked. Generally two weeks are required between application of WRP and other finishes.

WRP and other clear finishes do not provide long term protection against the UV effects from the sun. When used on their own they require reapplication at about six monthly intervals.

Note: Clear polyurethane finishes can breakdown under UV exposure and are not recommended for external use.

Paints

Good quality, light coloured opaque paint finishes provide the best protection against weathering, however they obscure the natural colour and grain of the timber. Pale colours are recommended to reduce checking and decay.

Recoating is necessary every seven to ten years depending upon exposure. Additional preparation (sanding repriming etc.) is frequently necessary.

Oils/Stains

Oils and stains are available which provide a relatively natural, semi-transparent, protective finish. Stains are often available with mould inhibiting additives.

Stains with light coloured pigments are recommended as they absorb less heat and only slightly change the natural colour of the timber.

Reapplication is generally necessary every two to five years depending upon the amount of pigment included, and the degree of exposure. Apart from cleaning, no additional surface preparation is generally required.

Maintenance

Reapplication of finishes will be required at regular intervals, depending on finish type and degree of exposure. Before recoating, all surfaces shall be thoroughly cleaned and loose dirt, grit, foliage etc removed. For some finishes, surfaces may also require sanding. Recoating shall be carried out in accordance with the manufacturer's recommendations.

Safe Working

Working with timber produces dust particles. Protection of the eyes, nose and mouth when sanding, sawing and planing is highly recommended. Refer to tool manufacturers for safe working recommendations for particular items of equipment.

Disposal of Offcuts and Waste

For any treated timber, do not burn offcuts or sawdust. Preservative treated offcuts and sawdust should be disposed of by approved local authority methods.
