opportunity to receive one of these tickets

Thursday 5th July 2012
2pm to 5pm
At 13 Davey St, Moorooka

Everyone is welcome
Please RSVP so we know how many
PRAWNS AND KEGS of beer we need or order
Please email or phone your RSVP to your rep or contact
Cherie at cherie@wilsontimbers.com.au

PRE- OILED TIMBER

**Our oiling machine
is now up and running... Order your
next decking pre-
oiled and save the
time and labour to
oil the old
fashioned way.**

Why Timber??

Timber is the world's most environmentally friendly building product. It is natural, reusable, recyclable and sustainable. As timber grows it extracts carbon dioxide (CO2) from the atmosphere. A little understood and exciting fact is that most of this carbon remains stored in the timber when it gets made into something else like a house, or dining table or even a wooden boat. Simply by choosing timber products you are helping our environment.

MONTHLY SPECIAL

**86 X 19 Spotted Gum Decking
\$3.30 inc GST**

**Please note: This decking has some
water damage....**

(A light sand and oil should fix the problem)

**This is a super special there will be no
refunds or replacements
While stocks last!**

“Here’s a story... about a man named Brady”

John Brady is the most recent to join our sales team as a sales representative. John comes to us with 25 years of timber and building experience, we could not pass up the opportunity to have someone of his calibre on our team! John is larger than life with timber on the brain... he has a great sense of humour and generally a really ‘nice guy’! We are sure all our customers will benefit from John being around. Over the next few months John will be out and about introducing himself to our customers. If you would like to speak to John about any requirements you may have do not hesitate to,

Call John on 0412 051 539 or email him at john@wilsontimbers.com.au

WARNING !!

"IF A BOARD IS GOING TO CUP - IT WILL"

Boards that have propensity to cup usually do so for a variety of reasons, none of which have to do with the fastening systems. No fastening system can prevent, delay, or otherwise stop a board from cupping except over the joists - by virtue of the fact that the cupping occurs between the joists.

The main reason boards cup is from moisture, either within the board or the immediate surroundings. Ventilation of the deck is a key factor. If the deck is low to the ground and the ground does not drain fast enough, the evaporating moisture rises and is trapped underneath the deck.

When the bottoms of the boards, especially hardwoods, dry more slowly than the top of the board which has free air flow and sunlight, the boards will cup. Hardwoods need to be fully seasoned before building the deck! The best prevention is to allow ventilation by spreading a healthy layer of coarse gravel over a plastic membrane that allows the rain water to run away and then dry. Skirting the lower sections of the deck also enables moisture to be trapped under the deck. Tops dry, bottoms don't = Cupping. Well ventilated + seasoned board = less opportunity. But, if a board is beginning to cup - it will. All you should do is design the project to diminish the opportunities. Boards which are dimensional unstable, 140 x 19 Australian hardwood for instance, are more likely to cup and more severely. Most hardwoods have the characteristics of absorbing moisture and expanding in such direction and strength to shear 10 ga. wire screws. When the deck fasteners fail due to the abnormal movement from moisture absorption, nails pull up, screws shear and it's "decks gone wild!". Design and execute your project to avoid expensive and labor intensive repairs.

Use narrow 75mm or 90mm decking boards in areas where ventilation and moisture could be a problem, your boards might still cup, but it will not be as noticeable!

Pre-oil your decking boards all round prior to installation!

REMEMBER
we can arrange
DELIVERY
AUSTRALIA
WIDE

With the way the economy is presently some of our customers have moved out of Brisbane to find work.

These customers are still finding it is worthwhile buying from us and because of this we have recently arranged transport as far afield as Mt Isa. Keep us in mind if you could use this service.

By building a deck using the **Deckmaster** system for your deck, Wilson Timbers **DPR Hardwood** for your upright posts and beams and then top it off with a **Solaris** Roof you are assured of a spectacular looking deck, and the cost will surprise you! We have had an overwhelming response from builders and architects alike who love the look your customers will too. If you need help ordering we are here to help you, just call us....

**Advertise your business
on our website....**

www.wilsons timbers.com.au

We are currently one of the top performers in
Google for Timber Brisbane.

We would like to offer all of our customers the opportunity to
advertise your business on our website by way of our
Builders Gallery

Simply email our website guru Cherie at cherie@wilsonsttimbers.com
with your details and contact number and she will take care of the rest
