

## SUPERIOR DECKING SCREWS BY SIMPSON STRONG-TIE

Gone are the days when home owners put up with nails that pull up or squeak on a deck, which has now become a treasured extension of their home.

Our innovation in deck design and construction methodology has not only driven us to release world class products that help the builder create safer and stronger deck structures, but it has also lead us to develop a market leading decking screw range to be enjoyed by both the builder and the home owner alike.

Simpson Strong-Tie has carefully designed the new evolution of Self Drilling Decking screw. The DSD range will be available in 5.5 mm (12g) and 6.5 mm (14g) diameter, with lengths from 50 mm through to 100 mm.

### FULL ENGAGEMENT

Torx drive 6-Lobe head provides a positive drive system, and attractive finish.

### DECORATIVE AND STRONG

A large countersunk head that holds the board firm, with nibs to help it embed cleanly and look aesthetically pleasing.

### CLEAN FINISH

A knurl or nib on the shank to allow for a clearance hole as the screw is installed, reducing driving torque and improving clamping force.

### 316 STAINLESS STEEL

For corrosion as well as ductility to allow hardwood timbers to move as they expand and contract. Class 3 carbon steel is also available where stainless is not required.

### EASE OF INSTALL

A drill point that will cut through the toughest of Hardwood timber with little chance of splitting, saving significant time for the builder.

Superior performance for decking projects: Deck-Drive™ screws are designed with the most demanding deck builders in mind. Whether the project calls for timber decking, premium composite or exotic hardwoods, you can trust Deck-Drive screws to provide you peace of mind.

Available loose for hand-driving, and collated for Quik Drive systems — with free bits in every pack!
