About Solaris®

Solaris® has an unparalleled reputation within the building industry for customer service and delivering consistently high quality insulated wall, roof and ceiling panel products that are engineered, tested and conform to Australian Standards.

Solaris® is a trusted Australian manufacturer and supplier of residential and commercial roof and wall systems using the latest in insulated panel manufacturing technology and COLORBOND® steel. Solaris® building systems simplify construction, delivering faster and more cost effective building solutions.

The Solaris® business is focussed on consistent delivery of high quality building products, customer service and product support.

Solaris® customers are reassured that our products are tested and engineered to Australian Standards and conform to the National Construction Code across the range of Solaris® insulated patio kits, residential and commercial roofing and walling.

Solaris® products are renowned for their all-in-one design with exterior and interior pre-finished COLORBOND® steel, high performance rigid insulation and superior structural performance with long continuous spans.

The Solaris® product suite is available in a range of exterior and interior profiles, COLORBOND® colours, varying thicknesses and as a division of Bondor have access to a wider range of products that include single skin roofing, PIR walling and fire rated walling systems with up to 3 hours of fire protection.

Solaris® look forward to assisting its customers achieve great success from the renowned Solaris® service offer and access to a growing number of innovative smarter building systems.

WHY WE CHOOSE COLORBOND®?

MADE FOR AUSTRALIAN CONDITIONS

Australia has a harsh and varied environment with extreme weather conditions; it is tough on buildings and requires a tough building material designed and tested for Australia.

Bondor® is the only insulated panel manufacturer in Australia that offers a Next Generation COLORBOND® Steel AM100 roof & ceiling. It features highly efficient, active metallic coating which provides superior corrosion resistance of the coated product via two strategically positioned magnesium compounds.

The COLORBOND® assessment program is designed to replicate building applications in Australian conditions. Results have clearly demonstrated they exceed Australian testing standards for steel building products.

BlueScope® Steel has 50 years' experience in engineering and setting the bench mark for the next generation of COLORBOND® Steel. They have proven to be more durable, more efficient and more sustainable. Therefore, offering a 15-year BlueScope® home improvement warranty.

COLORBOND® has 5 Layer of Protection

TOPCOAT: exterior grade paint is baked on to provide resistance to chipping, flaking and blistering and ensures the finish retains its look for longer.

PRIMER: a corrosion inhibitive baked onto the surface

PRETREATMENT: optimizes the adhesion of further coatings.

METALLIC COATING: activated technology to enhance corrosion resistance.

STEEL BASE: manufactured to Australian Standards

That is why we choose COLORBOND®.

FAQ

Frequently asked questions

Solaris® Products & Building Systems

Please find a list of commonly asked questions about our Solaris® insulated roof and wall panel products and building systems below. If you are unable to find the answer you're looking for, please do not hesitate to contact us on 1800 077 044.

Q What are Solaris® roof and wall panels made from?

A All Solaris® panels are made from the highest quality materials made in Australia /or sourced locally. Our steel exterior and interior sheets for roof and wall panels use BlueScope® Steel's locally manufactured and warranted COLORBOND® steel skins for the highest quality paint finish and longest durability available.

Solaris® insulating cores are primarily made from fire retardant expanded polystyrene (EPS-FR). Other cores, including PIR and Mineral Wool are also available with other products as part of a division of Bondor®.

RidgePanel® & CorroPanel® insulated roofing has a cover width of 1000mm, available in thicknesses 50, 75, 100, 125, 150 & 200mm for added thermal and structural performance, up to 18m in length.

SmoothPanel® insulated walling has a cover width of 1200mm, available in thicknesses 50, 75, 100, 125, 150, 200 for added thermal and structural performance, available in EPS-FR and Mineral Wool.

SmoothPanel® walls are typically made to order in 2.5-5m lengths to suit general walling applications but for specific projects can be manufactured up to 16m using thicker wall panels.

Q What COLORBOND® colours are Solaris® roof and wall panels available in?

A Solaris® insulated roofing are available in a wide range of COLORBOND® colours. Please refer to your Solaris® product information or speak to a Solaris® representative for more information.

Q Does Solaris® offer an installation service for patios, housing or commercial building systems?

A No, however, Solaris® recommend an experienced patio, roof or wall installer in your local area. Please see our Dealer Locator section at www.solaris.com.au for details or contact our office.

Q Can I walk on Solaris® RidgePanel® or CorroPanel® roof panels once installed?

A Yes, Solaris® roof panels are designed and engineered to withstand a human service load up to 140kg over the supported area of roof only. No loads are permitted on the unsupported side or cantilevered overhang section of roofs.

Q Can I cut or trim a roof or wall panel onsite?

A Yes, Solaris® steel roof and wall panels can be cut with a cold cut Saw (preferably with a swarf catcher), nibblers or any other recommended cutting methods approved by Bluescope® Steel technical bulletins. Please note, angle grinders are not recommended as they will damage the painted surface and steel cut edge. All metal swarf filings resulting for cutting are to be removed immediately from panels to prevent staining or damage of paint coatings.

Q Can I install a ceiling fan to the ceiling side of my roof panel?

A Yes, Solaris® offer fan mounting kits to attach a domestic grade fan to the ceiling side of a panel roof. Note, maximum weights do apply per metre as per product information.

Q Are hip and valley roof designs suitable for Solaris® roofing?

A Flat skillion and gable roof designs are the most economical for panel roofing. Generally, most houses can be designed to satisfy this requirement and maintain their aesthetic appeal. However, it is possible to use panel roofing on hip and valley roof designs if necessary.

Q Can I run electrical services within Solaris® roof products?

A Yes, a services duct/void is routed into each roof panel core join to facilitate running of electrical cables via electrical conduit. Of course, these should only be installed by a qualified licenced electrician.

Q How do I maintain my Solaris® products?

A Ensure your Solaris® panels are installed as per the manufacturer's recommendations and any exterior metal surfaces that are not exposed to "washing down" by rain should be manually washed regularly to avoid build-up of and corrosive materials or pollutants.

Q What warranties are provided with my Solaris® products?

A A comprehensive manufacturer's warranty is provided for all Solaris® products as well as a BlueScope® Steel backed COLORBOND® warranty depending upon the application and registration via BlueScope Steel, go to www.bluescope.com.au.

Q Why are darker colours treated differently?

A Darker colours attract heat and are less thermally efficient. The National Construction Code has been moving towards lighter colours particularly for roofing in recent years. This move is part of the building sectors commitment to reduce carbon foot print and contribute to achieving net zero energy buildings. Lighter roof colours mean less heat and therefore require less energy from air conditioning systems to cool a building.

Roofing products such as RidgePanel® or CorroPanel® must not be exposed to temperatures of 80°C or greater for an extended period. This can potentially happen when darker roof colours that are used in some locations around Australia. Please visit www.solaris.com.au for further explanation or consult Solaris® Rep or your local distributor.

Roof panel

RidgePanel®

Cutting edge technology enables the delivery of an architecturally appealing all-weather roof panel with a ridged profile, high performance insulation properties for residential, commercial, industrial and agricultural applications.

Standard Colour Options

The Solaris® colour range has been rigorously tested and hand picked with the support of Bluescope® Steel to offer roofing colours with the best thermal performance, made tough for Australian conditions.

Standard ceiling colours

Note: COLORBOND® Ultra roofing available (Surfist®) for coastal areas (POA).

Panel properties							
Panel thickness (mm)	50	75	100	125	150	175	200
Typical mass (kg/m ²)	9.8	10.1	10.5	10.8	11.2	11.5	11.9
SL grade total R-value (m ² K/W)	1.40	2.03	2.65	3.27	3.90	4.52	5.15

Note: The above Total R-values are for insulation average temperature of 15°C. Contact us for other temperatures and different EPS-FR core grades.

Solaris Single Skin Solution

Solaris® single skin offers you 2 profile options to help customize your look for your new undercover area.

Flat & W Plan profile both offer function, style and versatility. Suitable for a wide range of traditional & modern designs. Each panel feature a clipping system that locks the panel together, forming a virtually undatable weather-tight seal.

Made in Australia with over 65 years of experience and expertise in producing premium, high quality products.

Flat Profile

Width/Coverage: 295mm

- 0.42 Steel G550
- 0.48 Steel G550 S2
- 0.90 Aluminium

W-Pan Profile

Width/Coverage: 300mm

- 0.42 Steel G550
- 0.90 Aluminium

CLEVER

Naturelite System

For letting some light into a dark covered area, Solaris system offers the perfect solution.

The Naturelite System features translucent panels that integrate with the single skin roof panel to allow natural light to filter through.

NATURELITE
W-Pan Profile

NATURELITE
Flat Profile

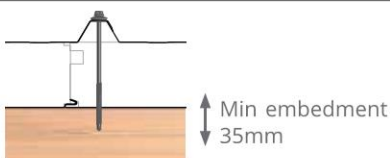

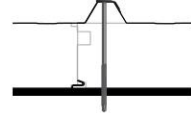

Features a domed exterior shape to prevent debris from accumulating on top, ensuring a cleaner appearance from the underside.

Insulated roof fasteners

RidgePanel® fastener details

RidgePanel® fixings to beam

Panel thickness (mm)	Timber beam Type 17 14-10 with cyclone washer or multiseal washer. Timber joint to be joint group J3 or better. (Min embedment 35mm)	Steel beam Metal tek 14-14 with cyclone washer or multiseal washer. (Min steel thickness 1.5mm)
		
50	125mm	125mm
75	150mm	150mm
100	175mm	175mm
125	200mm	205mm
150	240mm	230mm
200	300mm	300mm

Fixing recommendations

RidgePanel® roofing side laps should be laid away from the prevailing wind and sit neatly on the preceding roof sheet.

Refer to Solaris® Patio Engineering Guide for fixing details.

Non cyclonic fixing - through each rib

Cyclonic fixing - through each rib and pan

* Fixing to go through adjacent panel's side lap.

Ceiling joint tightness will vary depending on building components, site conditions and manufacturing tolerances.

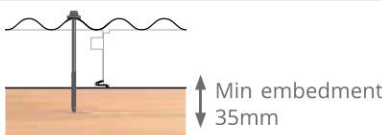

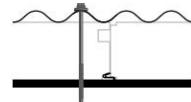

Insulated roof fasteners

CorroRoof® fastener details

CorroPanel® fixings to beam - all screws class 4

Panel thickness (mm)	Timber beam	Steel beam
	Type 17 14-10 with cyclone washer or multiseal washer. Timber joint to be joint group j3 or better. (Min embedment 35mm)	Metal tek 14-14 with cyclone washer or multiseal washer. (Min steel thickness 1.5mm)
		
50	125mm	125mm
75	150mm	150mm
100	175mm	175mm
125	200mm	200mm
150	240mm	240mm
200	300mm	300mm

Fixing recommendations

The CorroPanel® side lap should be laid away from the prevailing wind and sit neatly on the preceding roof sheet. Use Solaris® recommended insulated roofing fasteners along with cyclone caps with multi-seal neoprene washers fixed as specified. Fix side laps at approximately 1000mm centres using a M6-11x25mm Hex head roof zips screw (available from Solaris®). Fascia gutter flashings should be fixed using sealed rivets in the valley.

Non cyclonic fixing - through every 2nd rib (7)

Cyclonic fixing - through every rib (13)

* Fixing to go through adjacent panel's side lap.

Mandatory lapping screw

Ceiling joint tightness will vary depending on building components, site conditions and manufacturing tolerances.

Skylights

Bondor®'s Naturelite® skylight system is designed for exclusive use with Solaris® RidgePanel® trapezoidal insulated patio roofing to increase natural light into outdoor living areas. The Naturelite® skylight roof and ceiling panels are opal in colour and are developed to the RidgePanel's roof and ceiling profile specification. Made from high impact and UV stabilized material, the skylight is proven for use with outdoor patio applications in Australia. Naturelite® skylights deliver a smart and modern lighting solution that is easy to install with brighter results.

Note: It is recommended to pre-drill oversized holes to allow for thermal expansion for Naturelite® Skylight before installation.

Maximum Cantilever/Overhang is 25% of immediate backspan.

NOTES

- These span tables apply to enclosed buildings less than 20 metres high with sealed doors and windows and patio roofing as shown.
- Maximum overhang lengths cannot exceed 25% of panel backspan. Customers are advised to use a thicker panel if greater overhang lengths are required.
- Minimum roof width is 1.5 x overhang.
- RidgePanel to be fixed every crest. Additional mid-crest fixing required for Wind Class C2, C3 and C4. Additional pan fixing required in Cyclonic Regions C1-C4.
- CorroPanel to be fixed every second crest for Non-Cyclonic N1-N4. Fixed every crest for Cyclonic C1-C3.
- Total live load up to 140kg allowed on spanned sections of roof only. (Live loads not permitted on overhangs)
- These span tables are based on specific deflection limits calculated from serviceability loads for each wind class. (Deflection limits may be exceeded during extreme weather conditions when serviceability wind speeds are higher than usual.

Engineering

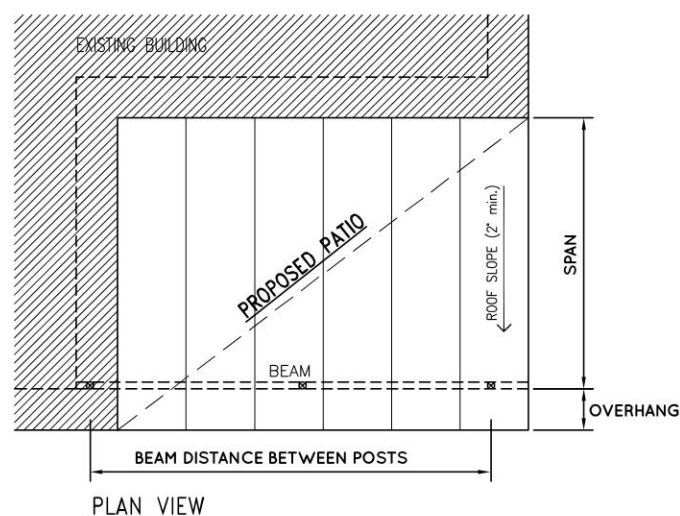

Maximum load on beam

Load width on the beam

* Load width on beam = 0.5 x span + overhang

Uplift load on the beam

Use the load width from above to select the uplift load on the beam (kN/m) from the table below for the particular wind category and patio type

Wind category	Load width (mm)	Uplift load on beam (kN/m)			
		Case A 3 open sides	Case B 2 open sides	Case C 1 open side	Case D fully enclosed
N1/N2 (W33N)	1500	0.84	1.44	1.73	1.58
	2100	1.17	2.02	2.42	2.22

	8700	16.58	28.58	34.30	34.30
	9000	17.15	29.57	35.48	35.48
	9600	18.29	31.54	37.85	37.85

Notes:
 1. Linear interpolation is permitted between Load Width values in the table.
 2. In cyclonic regions, it is assumed that doors/windows will blow in and therefore fully enclosed is designed as 1 open side as this is a worse case than fully enclosed.

BEAM AND MAXIMUM POST SPACING

Use the uplift load on the beam (kN/m) to select a suitable beam and span from the table below.
Ensure the beam's load capacity (kN/m) exceeds the load on the beam.

Beam details		Maximum beam span mm (distance between posts)															
Beam type	Beam Size	1800		2400		3000		3600		4200		4800		5400		6000	
		Single span	Multi-span	Single span	Multi-span	Single span	Multi-span	Single span	Multi-span	Single span	Multi-span	Single span	Multi-span	Single span	Multi-span	Single span	Multi-span

Patio construction overview - attached flat/skillion patio

The below overview is conceptual only. Contact Bondor® or your reseller, for Solaris® Patio Engineering certified construction details.

Solaris® installation instructions

This example shows a typical installation to an existing house timber fascia.

Handy Tips

Prepare your carpenter's trestles (or similar work platform) by taping soft material or foam to the top of the trestles.

Step 1: Panel preparation

Place Solaris® panel roof side up on the trestles (avoid dragging the panel to eliminate damage).

Step 2: Trim overlap & bend 90°

FIRST PANEL ONLY. The first overlay rib on the first panel acts as waterproofing under the side barge/apron and should be trimmed using shears as shown below.

Step 3: Remove foam & house fascia end

Cutaway foam below pans at the fascia (house) end to allow the pan turn up.

Step 4: Turn up pans fascia end

Solaris® roofs should always have the roof pans at the top or house end turned up to full rib height. It is important to ensure the pan is turned up to the full rib height for the complete width of the pan so no 'low' points exists. The Turn-up/Turn-down tool is available from your Solaris® distributor.

Step 5: Trim house fascia end overlap

Trim the overlay rib to prevent fouling with the turned up pan of the adjacent panel.

Step 6: Trim gutter end underlap

Trim the underlay rib of every Solaris® panel at the gutter end to prevent water drawback via capillary action.

Step 7: Remove gutter cutback foam

Turn the panel over roof side down on the trestles. Remove core material from the gutter cutback end of the panel with a plastic paint scraper to ensure that the fascia flashing can be installed correctly.

Step 8: Electrical preparation

Mark the location of each downlight/fan, cut appropriate size hole in the Solaris®. Feed electrical conduit through service duct to fan or light location. The ceiling core-strip protective film should be left on while any marking, drilling and cutting is carried out. Install the lighting/fan as per instructions. LED Downlights & fan bracket kits are available from your Solaris® installer or contact Solaris® for more information.

Step 9: Peel back plastic

Peel back protective coating on all edges of the panel ensuring you are past the beam at the front of the patio.

Step 10: Installing panel

Place a towel or blanket over the beams that the first panel will be in contact with. Place the cutback end (gutter or low end) on to the covered beam and then push the panel back into the rear receiver channel.

Square off this first panel. Pin with a screw fixing in the top middle rib and with a rivet underneath receiver channel to hold it square and in place.

Note: For longer span ensure panel is supported mid-span to allow for join to engage.

To install the second panel, place the overlay flap of the roof skin over the previously fitted panel and with the panel at approx 20° pull it down and engage the male interlock into the female interlock.

Slide this second panel towards the back receiver channel. To be sure you are successful, the ceiling join should be a neat 'V' join, with 0-2mm of the male interlock showing.

Screw fix to the beam and rivet bottom of the receiver channel ensuring your line is square.

Step 12: Screw down remaining Ribs

Screw down the remaining ribs. Refer to fixing recommendations on Page 5.

Step 13: Fix to receiver channel

Fix receiver channel to the top (above ribs) and the bottom of the panel.

Step 14: Clean down roof

Once roof fixings are installed use a soft broom to sweep swarf and debris off the roof surface before installing flashings. Once flashings and gutter are installed clean the flashings and roof using the same method. Ensure gutters are clear from swarf and debris to prevent corrosion. A wet microfiber cloth can be used on COLORBOND® to clean down any marks.

Ceiling fans bracket kit

Where lights or ceiling fans are required, electrical cabling should be pre-wired through the fascia, sheathed inside flexible conduit inside the service ducts on the female side of the panel. Locate fans and lights away from slip joint by drilling horizontally through the foam and then using the appropriate diameter metal-holesaw, drill through the underside of the steel sheet to required depth. Fans should be located centrally below a rib as through fixing is required for bracket.

Clean up and Maintenance

Ensure all metal filings (swarf) are swept off and disposed of into bins as you install each sheet. These filings can leave unsightly stains on the surface of the sheet and also on floor tiles/pavers, etc, in the near vicinity.

Intermittent cleaning of all surfaces not washed by regular rainfall will prolong the life of the products and keep them looking their best. A mild detergent solution is recommended ensuring the surfaces are always wiped off with clean water afterwards. Hosing of the ceiling is to be avoided as it will cause water to sit inside panel joins and flashings leading to possible corrosion.

Skillion insulated patio kits

Whether you are after a relaxation zone, an entertainment area, having all year round outdoor space or simply wanting to add value to your home, a Solaris® patio offers the solution.

With a full spectrum of options and a range of benefits including durability, style, ease of installation and a cost effective end to end solution.

Our patios are made from Solaris® panel with a versatile paneling system that easily fits to a number of applications. It provides protection from the elements which is an important aspect in the enjoyment of the outdoor lifestyle.

Solaris® patios offer a permanent high performance roof to cover your outdoor recreation area, providing year round shelter from the sun and rain. It can be erected as either free standing or an attached structure, with a skillion or gable roof type ensuring maximum flexibility in design and use.
